

***The quantum impulse and the space-time matrix –
our everyday life in the language of quantum physics***

The content of the presentation on 08.10.2015

Thank you very much for coming. It is my pleasure to welcome you all here.

“The Quantum Impulse and the Space-Time Matrix” – this is the title of my fifth book. I have reached the stage when the exclusively technical findings of my research might also easily be related to our own everyday lives. This compatibility of my observations with our common, human wisdom also affords me with an additional proof.

When I talked to my friend from Oxford about giving this presentation, his advice was: “Let your name *KISS* be your guide. *Keep It Simple, Stupid!*” However, this “simplicity” will need examples and I hope these will well illustrate the content of my book.

The overall message of my book is that the *quantum impulse* is the building stone of the universe. The simple translation of this statement means that we all have our own *spirit*. And our *spirits live forever*.

It is very risky speaking about the *spirit* in the context of scientific research, but if the proofs are given, it can be pronounced.

The spiritual life is always an actual subject, whether we speak about it out loud or not. Einstein was asked many times to speak about the relation of science and religion. His articles are full of logic, but he has always got around giving the direct answer with the necessary diplomacy.

Max Planck stated with his full experience and knowledge, that matter as such does not exist.

Everything surrounding us is just an illusion. This can be understood in many ways, but for me it means we live in processes.

1. The quantum impulse

Our world basically is bipolar. Empty and full; plenty and few; small and big; proton process and neutron process and so on... And we are balancing between the two poles. The speciality of this bipolarity is that while one direction happens on its own, the other direction always needs a drive. Emptying the purse is easy, the refilling needs work! Slowing down is easy, speeding up needs work. Life gives us examples without end.

This is the case in the elementary world as well. Elements themselves are repetitive processes in cycles. The elementary process in one direction happens on its own, but the other direction needs the internal drive of the process. The same way as it is in the family. The family can use only those products, purchased or produced by the family itself. The internal energy of the elementary process cannot be utilised in full within the cycle. The cycles cannot run out to zero, as there would be in this case nowhere for the new cycles to start from. If we eat all our food for dinner, there will be no breakfast for the children next morning.

This is a little bit similar to the casino game: winning and losing. We only have the chance to play in the next round again if at least one token is left. No token means, no more game, the end. Having the token means not only the game but also the chance to win. It is the same in the elementary world. There is a small portion of the elementary process left within each cycle. But in this case not only this small portion remains, but also that elementary drive, the energy of that *quantum impulse*, which otherwise would complete the process. In simple terms, this means that the *quantum impulse* is the natural end product of each elementary cycle.

The elementary process starts with a new cycle and the remaining *quantum impulse* is not only accumulating within the space, but this *quantum impulse* itself is the one composing the space. In this way, the elementary cycles from cycle to cycle (including also all natural losses) start always with less and less values. This is the elementary evolution from the *plasma* state to the *Hydrogen* process, as I call it.

The space has been established by the quantum impulse of the elementary processes. And the space is not just about the space above the *Earth* surface, but below it as well. The difference is in their intensities. The intensity of the elementary processes below the surface is higher than that above the surface.

When I have come in my research to the point that the cooling of the plasma during the elementary evolution resulting in the formulation of the *Earth* core, full with elementary processes, the question was: how can the overall process ensure the continuity of the quantum impacts? How can be ensured the harmony between the inside “big” and the outside “small” intensities? There is no way having the continuity between the two disrupted. The solution is the water, covering all over the *Earth* surface. Water slows down the quantum signals, in this way the increased quantum impact below can be connected to the external one above of less intensity. There is something similar, I have remembered in the Old Testament. I have taken the Bible and opened it. The first two sentences are: “(1) *In the beginning God created the heaven and the earth. (2) And the earth was without form and void and darkness was upon the face of the deep. And the spirit of God moved upon the face of the waters.*”

There are four statements within these two sentences. All four are the necessary corner-stones of the elementary evolution: The first *the heaven and the earth*, the formulation of the *Earth* core; the second is the *water*, for the transition of the quantum impacts; the third is the *darkness was upon the face of the deep*, as there was no conflict yet between the quantum impacts of the *Earth* gravitation and the external quantum impact of the *Sun*, which results in light; and the fourth and the most important now for us was: “*And the spirit of God moved upon the face of the waters.*” The infinite high number of quantum impulses composes the space itself.

This is a grandiose, simple and at the same time precise definition of the formulation of our world. And it has given me a kind of certainty and pleasure... See, Moses has already described it in his first book, the *Genesis*. The *quantum impulse* is the product of the elementary processes.

In one of the subsections of my book, therefore, I have taken a look at the first ten verses, up to “*Let the earth bring forth grass*” point. And the description is in full correspondence with the phases of the elementary evolution. The conflict between the quantum impact of gravitation and the *Sun* is not just *let there be light*, but its increasing intensity resulted in the rotation of the *Earth*. The further increasing conflict resulted in the increase of the temperature and in the steaming of the water, the *firmament* which has divided *the waters from the waters*. The temperature is still increasing even these days, as the permanent increase of the quantum impacts from our technologies continues to deepen the still existing conflict.

The space cannot be empty. There are no photons flying within the empty space or in the almost vacuum, as the official science believes it, rather *quantum impulses* establish the space, transferring all information.

The elementary world is reasonable. An elementary cycle can only be efficient if the remaining quantum impulse is of infinite small value. Otherwise, we would easily and quickly lose all our energy sources. The quantum impulse in simple terms is similar, sorry, to the definition of the working class, given by Marx: There is nothing for them to lose. It cannot be turning into *nothing*, as it cannot drive anything, nowhere to spend its intensity. It is the smallest “force”. It cannot be driven, as it is outside of the elementary processes. In this way the lifetime of the quantum impulse is infinitely long!

2. About your spirit

Cycles are well known for us. Our everyday life represents cycles. There is also no question but we have been built up from elementary processes. In this way, our elementary processes generate our quantum impulses, our personal characteristics, our astral appearance, our spirit at the end of each of our elementary cycles. We have our quantum presence in parallel with our physical life, which does not stop existing after our death. On the contrary it remains acting forever. Our spirit is in constant contact with us for all our life – if we allow it. And after our death it will be in contact with those people whose quantum characteristics are similar to ours.

Our spirit is the product of our elementary processes. The balance between our physical and spiritual self is not a fairy tale. Our physical elementary structure has its quantum impact optimum. If anything becomes declined relative to this optimal status, the spiritual support will be coming, as the differences have been reflected by our quantum impulses – our spiritual impact. Spirits, similar to ours, will be taking over parts from the problems, as they are of the same space-time.

The technical basis of the support is simple: all elementary processes have their own physical parameters, including our own physical elementary presence as well. The quantum impacts of our elementary processes determine our personal space-time, what we belong to. If our physical presence is changing, the impact is changing as well. We cannot change our shirt during a football match; we play for our team and the team plays for us.

Quantum impulses, similar to our spirits, “join and help” as they are of the same space-time. It is easier to dissolve a damaging impact in a bucketful of water than within a spoon. Spiritual communication resolves the conflicts. This is, in fact, nothing other than clear elementary quantum communication. In a spiritual meaning, you have not been left alone.

Our own space-time is our protecting umbrella. The larger our space-time of communication is, the less is our quantum load and pressure. The distance has no importance.

Our elementary and astral presence must be in balance. And the balance is working, if we let it be acting. It is important to underline “allowing it” and “let it be”, as the influence of the mental ego is huge. And this is risking the physical and the astral (spiritual) balance. As we always remember it in our prayers: *“Do not lead us into temptation!”*

There is no such a temptation in the elementary world, at work there is the strong rationality only. The wisdom of the philosophers of the East says: Between *God* and you is yourself. The biggest risk to the harmony of the physical and spiritual balance is yourself, your ego.

Our spirit is with us. But we can leave it behind, as our spirit does not have any drive to follow ourselves. Therefore, when we slow down, our quantum self returns back to us, or, better to say our spirit will be surrounding us again, fulfilling our personal space-time. Our spirit belongs to our space-time. This is the reason meditation has its positive impact.

Our space-time connects us with all similar spirits, with all our predecessors. We are, in our physical presence, representing all of them. We also can say we are one and the same with them. Our spirit never dies, it remains living forever. We are the followers of our predecessors. I have finally understood what the meaning of the age of a spirit is. It is the summarised lifetime of all my predecessors. I do not know how to measure it and do not care too much about it. The summarisation for me as principle is more than enough.

We cannot speak with our spirit, but we can receive its messages: we always know inside ourselves whether we are you happy or not. Our spirit belongs to our space-time.

3. The space-time and the aura

The space is established by quantum impulses, the space-time established by events. If our garden is the space, our apple tree, our pear tree and all our other trees in the garden are separate space-times. The space in its classical meaning is of length dimension. Contrary to this the space-time is classified by our speed value of quantum communication and by the intensity of our actions. The higher the speed value of our quantum communication is, the larger is our space – for communication. The stronger we kick the ball, the farther it flies. And the more our intensity is, the less time we need to kick the ball so far away. Do not worry about the number of the cycles the *Earth* has made around the *Sun* since the day of our different birthdates. That is not about our time count. That is the time count of the planet called *Earth*. For orientation, it is quite a good parallel, but our age depends on our own time count. The larger our individual space-time is, the more our intensity is, the slower our internal time count is. The intensity, in this context, is not about being lazy or working hard, rather the synonym of our

internal efficiency. Being in physical-spiritual balance slows us down, puts our intensity on our optimal level; slows our time count down.

The aura is different than our spirit. The aura is the vice versa impact of our quantum communication within the space surrounding each of us. The aura is a permanent conflict which one has to manage. Each one of us is the integrated quantum impact of our elementary processes. The space is full with elementary processes and quantum impacts, and not just of different origin, but also of different intensity. Using the casino case, this is not about the token, rather the game itself. If we have energy surplus, our aura is bright. The quantum impact of our elementary processes in this case puts the boundaries of our aura far from us. If our aura is grey or even it is not seen, it means our energy consumption is more than our energy generation. We are in decline and we cannot leave this tendency without response.

The City of London is the classical example of one of the hardest aura conflicts. The City is overloaded. Each square metre of the Bank quarter generates a flow of quantum signals. Computers, mobile phones, I-pads, the operating information technology, all load the same quantum space where I try to operate with my own aura, with my own physical presence, with my spiritual tokens. The physical demand of the quantum impact load is huge. Withstanding this challenge without consequences needs extraordinary fitness. But this I am afraid is similar to any addiction. If the load is off, it is missing.

But we do not need to go to London for having a life full of quantum signals. This kind of pressure, similar to a stretched membrane is present already. Our auras try to get grip on the uncountable quantum signals of our modern life. In the case of the increase of the quantum signals – and the signals are getting more for sure as this is the era of the increasing mass use of the information technology – this membrane will be stretched more and more. The number of the conflicts is increasing. This fact underlines even more the necessity for the physical and spiritual balance.

4. The energy of the quantum future

I enjoy the results of my research. The proper real objective is to specify the energy source in line with the quantum future of our children. And we will find it, because the young generation is talented and has intuitively this kind of quantum approach. Just take a look how they manage the computer technology!

The balance in the field of the energy generation has been broken. There is a chaos there. We all know that energy production technologies with destructive environmental impact have to be replaced, but this is impossible in a conventional way without the renewal of the approach. The water, the wind and the *sunshine* are all important sources, but they cannot be the replacements of the current, still necessary but in fact environmentally destructive ones, even with the best use of advanced design and planning. For finding the new energy source we need new views and a new approach in physics. Different from today's one with the glib statement that "we know already everything, just the details have been left to discover" – which has always been the wrong concept of outworn eras in physics.

I would like to say a couple of words about this subject before finishing my presentation.

5. But before, let us take it a little bit easy

When I was a young boy, I was taken for specific suit-purchase-projects to Budapest and then back to my village. Sitting in the train I was always thinking, what would it be if this were not me who was travelling, but the railway stations, which pass one after each other in front of me, travelling beneath me on the railway track? But there are so many rails in different directions and so many children, taken for buying them a suit?!

Or, from time to time when stepping down from the bus arriving at my Grammar School it was in my mind that it was not me who was actually stepping down from the bus, rather it was the *Earth* surface

approaching me from below. But, in this case, should the bus also be lifted upwards?! And there are so many buses and also the bus station and there are so many who step down?!

6. Relativity

Einstein did examine *gravitation* at the beginning of the last century. His methodology was a new one and the world was amazed. But in fact it was easy, since he has just given the proof of the Newtonian concept, just in different form.

I do not want to weary you now speaking about the proofs of my definite position regarding this issue. I would just like to bring your attention to the point that if gravitation really is an attraction, all of us and everything in fact is being taken by the *Earth* (surface). If gravitation is the accelerating expansion of the *Earth* surface, everything is being given to us. This comparison is not fully correct, but globally it is true.

Let us see, if given, what – alongside with all our minerals, food, everything – is given: The *spirit of God* has for sure been given, as Moses wrote it down, since this is the spirit of the *Earth*, the *quantum impulse* of the elementary evolution from the *plasma* to the *Hydrogen* process. Elementary evolution starts with the *plasma* and ends as the result of the expansion with the *Hydrogen* process and not on the contrary.

The aura of the Earth, the *gravitation impact* has also been given, as this is the consequence of all elementary processes. The aura as we have discussed is sensitive to conflicts.

Both impacts are of infinite low intensities. But relativity is and shall be about the way how we manage different kind of intensities. The space-time on the *Earth* surface and the space-times of the elementary processes of the elementary evolution are completely different. The process, which is infinitely long on the *Earth* surface, is only a wink in the space-time of the *plasma* process. We live in intensities rather than in absolute values. If I drink my coffee up in two sips, and you drink out it up in four sips, my coffee-sipping-intensity is double in comparison to yours. At the same time, the volume of our coffees is equal. It is the same with the gravitation as well. What for the plasma is a single sip that for me on the *Earth* surface is the eternity. I do not feel at all on the *Earth* surface, but for the plasma it might be seen that I do not drink coffee at all. But I drink, just for the plasma this is an infinite long process, because in its space-time this is of infinite low intensity.

In this case, let us speed up the impacts, in order to have the intensities conflicting at the level of the energy generation in our space-time on the *Earth* surface. In the same way that the conflict of the quantum impacts of gravitation and the *Sun* generate light, another, many times higher than this conflict, can generate energy. This is an energy source, which can replace all other ones and we have it everywhere without realising its presence. It does not destroy and does not sacrifice natural sources. Just we have to grow up to have it. We have to deserve it.

This is also the message of the book.

7. I am grateful for your attention

To whom could I speak about all this if not to my friends?
